TGS2600 Product code: TGS

Product code: TGS2600 **Manufacturer:** Figaro Engineering Inc.

In the presence of a detectable gas, the sensor's conductivity increases depending on the gas concentration in the air. A simple electrical circuit can convert the change in conductivity to an output signal which corresponds to the gas concentration.

The TGS 2600 has high sensitivity to low concentrations of gaseous air contaminants such as hydrogen and carbon monoxide which exist in cigarette smoke. The sensor can detect hydrogen at a level of several ppm.

Due to miniaturization of the sensing chip, TGS 2600 requires a heater current of only 42mA and the device is housed in a standard TO-5 package.

The typical range is 1-30 ppm of hydrogen.

Measurement range

Target Gas

1-30 ppm H2

Air pollutants
