

LPM2610-D09

Product code: LPM2610-D09

Manufacturer: Figaro Engineering Inc.

The LPM2610 is a pre-calibrated module for LP gas alarms which is precisely calibrated in Figaro's humidity and temperature controlled facility. The module uses TGS2610-D00 which incorporates a filter to eliminate the influence of interference gases such as alcohol, resulting in highly selective response to LP gas.

The most important process in manufacturing reliable residential gas alarms is adjusting the alarm point. Calibration is a complicated and time consuming process which also requires a substantial investment in calibration equipment. By eliminating the costly calibration process, this module enables users to easily and simply manufacture residential LP gas alarms.
