

EDI030109NG-BIO

Product code: EDI030109NG-BIO

Manufacturer: Edinburgh Sensors

The Gascard NG is a OEM board with infrared sensor for the measuring of CO₂.

This board, produced by Edinburgh Sensors, has been developed to allow an easy integration in several applications in gas monitoring field and in particular for applications which need high quality, long term stability and precise measures. The board is temperature compensate and it has RS232 interface. As optional choice there is also the Ethernet interface.

The model EDI030109NG-BIO has range 0-100% and it is calibrated specifically for Biogas ambient, considering the presence of methane.

Power Supply	24V DC (7-30V)
Measurement range	0-100% Biogas
Target Gas	Carbon dioxide
Output	0-20 mA
