

EDI030305NG

Product code: EDI030305NG

Manufacturer: Edinburgh Sensors

The Gascard NG is a OEM board with infrared sensor for the measuring of carbon monoxide.

This board, produced by Edinburgh Sensors, has been developed to allow an easy integration in several applications in gas monitoring field and in particular for applications which need high quality, long term stability and precise measures. The board is temperature compensate and it has RS232 interface. As optional choice there is also the Ethernet interface.

The model EDI030305NG has range 0-3%.

Power Supply	24V DC (7-30V)
Measurement range	0-3%
Target Gas	Carbon Monoxide
Output	4-20 mA 0-20 mA
