DP/10/P

Product code: DP/10/P **Manufacturer:** Solartron

The transducer DP/10/P is an LVDT with "pneumatic" technology.

Pneumatic operation (pneumatic push or vacuum retract) allows the number of moving part in a fixture to be reduced, resulting in improved reliability and reduced fixture costs.

Characterized by an accuracy (% of reading or um) of 0.2 um; from a repeatability (um) of 0.15.

Optimal for applications in metrology, test benches and testing, in the fields of Structures.

Category	Pneumatic push
Measurement range	10 mm
Technology	LVDT
Typology	Digital
