

OP12,5

Product code: OP12,5

Manufacturer: Solartron

The optimum series OP12,5 of LVDT transducers is an ideal choice for process control and research applications.

The free core variants are designed for precise linear positioning and measurement of moving parts where zero friction and hysteresis is required within a restricted space. The free core version is available with an optional light weight core for mounting on to small, rapidly moving structures without affecting their performance and integrity - important in some control applications. The lightweight core has a 1.9 mm diameter which improves core to bore clearance, making alignment easier. A light titanium core carrier can be supplied on request.

The optimum is also available as a guided product and with universal joints either as an LVDT or digital product for use in applications where it is not possible to mount the core and carrier on the moving part.

- Good measurement range to length ratio,
- Small body diameter,
- Large radial core to bore clearance,
- Rugged construction,
- High performance,

Measurement range

± 12.5 mm
