PVPark – Server

Product code: PVPark – Server

Centralization and transit management device for parking lots.

Software with client-server structure supplied installed on a fanless processor, authorizes the transit of the vehicles based on the logics previously set, which can be defined in terms of gate, time slot, temporary permit, profile management authorization and management of the opening command directly to the camera (which has an on-board relay for interfacing with the gate automation).

Compatible with PVxx ANPR cameras.

The PVPark device can manage up to 16 gates and integrates 1 license for the PVPark-Client application, to be installed on a PC (Windows OS) for real-time display of transits, configuration of access logics, transit consultation.

It is possible to activate additional Client licenses, for management from multiple operator stations.

12Vdc power supply - 230Vac power supply unit provide.

Functionality	Access management
