

MP1010M-VC

Product code: MP1010M-VC

Manufacturer: Tamron

Tamron camera block based on 1/3-type CMOS (Progressive Scan) sensor with Full-HD 1080p60 resolution.

The camera block integrates a stabilized 10x motorized lens with vibration compensation mechanism, feature which, in conjunction with the extremely compact dimensions, makes the camera suitable for surveillance and inspection applications.

MP1010M-VC differs from the MP1110M-VC model due to the absence of the 16x digital zoom and the CVBS output, directly on the KEL connector, in NTSC or PAL formats.

The camera block can be controlled by a master device via the VISCA protocol [Sony owner].

Auto ICR	No
Lens	10x optical
Resolution	1080p60
Image stabilization	Yes
Wide D	Yes
