

Surface inspection and gloss measurement sensor

Product code: Surface inspection
and gloss measurement sensor

Manufacturer: Sensor Instruments

The sensors of the COAST Series (COLOR And STRUCTURE) are hybrid sensors that comprises two sensors that only are synchronised by the LED ring light but otherwise operate independently of each other. Both sensors can be connected to a PLC or to a PC.

One of the two sensors (color sensor) provides information about the color and gloss of the object to be inspected, while the other sensor (structure sensor) checks the structure of the surface.
