LadonBoard

Product code: LB-T

With the new LadonBoard, designed and developed by Tecnosens, you can now manage several video signals of various kinds at the same time: from the IP stream of regular Onvif cameras, up to the uncompressed streaming of high-resolution sensors.
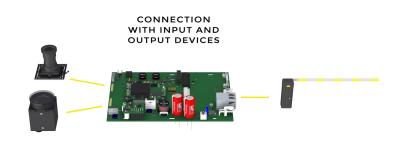

Thanks to its data acquisition system, it is possible to obtain aggregate data which are suitable for both real-time and post-process video analysis.

The board is also equipped with several data storage units and various I/O interfaces, making it extremely versatile and suitable for integration with other systems.

The mobile data connection module and the gigabit network interface ensure quick and easy data transmission and system monitoring.

A powerful and flexible board, with optimized consumption and reduced dimensions, in order to adapt to all needs.
